

Carriage Rollers

Carriage Rollers - Carriage rollers are particularly designed bearings that are utilized on lift masts to be able to help them work in difficult environmental surroundings. Lift masts are normally subjected to shocks, oscillations, vibrations and high dynamic and static loads. This apparatus is regularly exposed to environmental influences like dust, cold, heat, moisture, contamination and aggressive ambient air. Therefore, the lift masts' guidance arrangements must be specifically tough and have a specific high load carrying capability.

Carriage rollers have been developed as the solution for functioning in various environmental surroundings. These bearings are the solution where the guidance arrangements of the lift masts should be economical and maintain operational security while having the capability to handle a particularly high load carrying capacity.
