The U.S. forklift division stationed in Cleveland has a professional team experienced in Product Sales, Purchasing, Marketing, Logistical and Technical Support.

In the beginning the home-based lift truck market in Korea was an open import enterprise. Korea Machinery Co. Ltd. begun in 1960, to import fully assembled forklifts as part of a domestic machinery expansion project. Sales of these products were initially targeted to state-run companies, large scale businesses, and the military. This ultimately led to a unification with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division begun trade operations throughout Korea to service and sell this heavy equipment. By 1978, a forklift production plant was successfully completed. Continuous technical education became the new focus for improving quality and product development.

Home-based lift truck business for Daewoo started in 1967 and grew to an astonishing 90% market share in Korea. By the 1980's, Daewoo's progressive technological enhancements combined with sales success placed them in a position of considerable expansion of their lift truck business.

Caterpillar Industrial Inc. of the U.S. in 1981, proposed a cooperative venture project to assist them in the highly competitive North American materials handling market. This joint-venture proved highly profitable for Daewoo and their forklift product sales expanded greatly. In 1984, the company completed construction of a new facility to help in manufacturing high end value-added goods for export. In 1993, the corporation had a global sales network and started exporting designs they had developed through in-house technology, as an sovereign product. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing growth opportunities into overseas markets.
